INNOVATION

The new requirements of industrial processes call for efficient management of liquid fluid transfer phases to ensure the quality of the products placed on the market. In addition to eliminating dilution residues at the end of the transfer, integrating our **mobile pigging cart** into your manufacturing processes will **optimize** your cleaning cycles by minimizing water consumption and eliminating the cumbersome draining phases for your operators. By opting for our mobile **pigging system**, you can be sure to meet market imperatives while reducing the costs associated with cleaning your hoses!

The expertise of a designer and manufacturer

Mobile pigging system

Pig

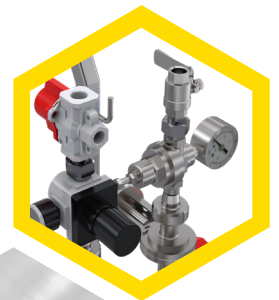

ERGONOMICS

- Easy to use
- Safe insertion or extraction of the pig
- Reduction hoses handling
- Reduction of musculoskeletal disorders
- Compact and mobile solution

OPTIMIZATION

- Recovery of all residual products
- Optimisation of cleaning processes
- Optimisation of products transfers
- Reduction in hose downtime
- Recovery of residual effluent volumes
- Optimisation of product traceability

TECHNICAL DATA

- 316L (1.4404)
- For any hose length
- From ND25 to ND100
- Hose connection with SMS/CLAMP/DIN fitting or MACON
- Water, air or nitrogen push
- Assembled and tested in our workshop.
